

Knowledge about international best-practice is the only way to make certain that solutions are rational and efficient.

eHealthLAB is a knowledge center seeking to improve healthcare

Healthcare technology is designed to improve your organisation's processes and bottom line.

But in reality, choosing the best technology or products is overwhelming, time-consuming and costly. And in the end, it's often ineffective.

There's a better way. With eHealthLAB you'll find what you need to make practical and successful healthcare technology decisions.

Access our knowledge

With eHealthLAB membership, you can use our insight from a network of members across the world and across the industry. We share knowledge about best practices and technology solutions to help you learn how to choose the best implementations and minimise problems.

Audits and usability tests

With eHealthLAB audits, you ensure you're making the right

choices for your organisation. Assess your technology solutions with expert and customised audits and usability tests, and you'll make sure your tech is rational, usable and smart.

Your trusted resource

Rational solutions. Time and cost savings. Focused and practical processes. That's what you seek with healthcare technology. To make sure you get it, use eHealthLAB as your trusted resource.

Join us to access best-practices and save time and money

When it comes to healthcare technology, you might have more questions than answers.

Becoming a member of eHealthLAB gives you a network of knowledge and resources from across the world, a reliable place to help you find the best healthcare technology solutions.

Save time and effort from market research, networking, staff education, and competitive analysis. Reduce the cost of pilot projects, education efforts, and unending planning. Nurture innovation, and learn from your peers.

As an eHealthLAB member, you get access to the vast reserve of international best practices. And there's more:

Five membership benefits

1. Personalised eHealth Review

You'll receive a personal interview to discuss your current challenges and focus areas. From this review, we'll be able to offer potential peer and business matches and areas to research.

2. "Current Best-Practices in eHealth"

You'll have access to current and past issues of our member-only publication reporting on news, events, and research and testing conducted by eHealthLAB. Through a focus on best practices and proven solutions, the content in this publication is unique and invaluable.

3. Use of researchers

Members can use eHealthLAB's research staff for short inquiries at no additional cost. The research staff can also be employed at 15% discount to look into specific areas of interest and

Are you up-to-date with emerging healthcare technology?

Do all members of your team or department know where they might find the eHealth knowledge they need?

conduct interviews and technology or market research.

4. Events

eHealthLAB organises several joint trips to important events worldwide where members can participate.

5. Discounts

Members are entitled to special discounts and pre-registrations for events hosted by eHealthLAB, such as conferences, workshops and more.

Who makes up the eHealthLAB membership?

Hospitals and clinical facilities. IT companies and pharmaceutical companies. Universities and institutes.

Our eHealthLAB membership is your organisation and your peers. Join today and be part of a community devoted to best practices and innovation.

Unique combination
The fact that eHealthLAB membership is open to both end-users of healthcare technology and developers, researchers and suppliers make for a unique combination.

"Looking at IT from an organisational perspective is very important. We have seen too many examples of solutions implemented without that focus."

Jonas Egebart
Medical Doctor, CEO, eHealthLAB

An eHealthLAB Audit ensures that your project is in line with standards and needs

Are your projects and solutions practical for your organisation? Are your product prototypes headed in the right direction?

With a personalised audit of your organisation or products, you can save time and money. A careful look at your individual needs and goals, along with an evaluation of potential solutions, can put you back on track.

An eHealthLAB Audit can take place during the planning, implementation or delivery of any healthcare technology project. The scope of the audit can be on several levels. We can coach project leaders or deliver reports and recommendations to management.

With our extensive knowledge of the industry, and our placement in the forefront of new research and achievements, we can advise you on the best products and improvements

Hospital and healthcare organisations

What do audits accomplish for hospitals and healthcare organisations?

We ensure rational solutions but also time and cost savings through:

- Benchmarking against international best practice
- Ensuring that projects and solutions are usable in the organisation
- Enabling project leaders to get qualified feedback and advice during a project
- Evaluating the projects in progress are meeting the requirements

Healthcare technology developers

Our services also satisfy the needs of healthcare technology developers and suppliers by:

- Testing prototypes in an early development phase to avoid costly re-programming or re-design
- Giving feedback with an international dimension to the development or implementation process
- Ensuring that current projects are on-track and meeting end-user expectations

Help us improve healthcare technology

let's stay in touch

eHealthLAB is built on the concept of learning from the experience of others. Why start a healthcare technology endeavour from scratch, and end up with inefficient, ineffective solutions?

We offer a way of showcasing the best practices from around the world, along with a mechanism for customised, one-on-one assessments.

Through an international network, hospitals and suppliers will be able to choose and design healthcare technology solutions that are:

- **Rational and efficient**
- **State-of-art in an international perspective**
- **Useable by the organisation and personnel**

We believe that the healthcare industry will benefit from the sharing of technological knowledge across industries and across global boundaries.

With a firm basis of international best practices, healthcare organisations can discover and implement the most efficient and effective technology solutions.

Contact us today for membership and audit opportunities.

eHealth is diverse

From electronic health records to medical devices. Ubiquitous healthcare and point-of-care applications.
