## Challenge 2: Cognitive systems, Interaction, Robotics – 97 M€

Artificial systems which can perceive and interact robustly, in open-ended, (mainly) physical environments, and have smart / cognitive / intelligent / natural / intuitive features.

Such systems could be:

- robots
- Stand-alone or networked devices (e.g. cameras, sensors), embedded or not
- Man-machine interfaces etc

# C-I-R focus

- **robots** handling different objects and operating autonomously or in cooperation with people
- **systems** (robotic or not) monitoring and controlling material or informational processes
- multimodal **interfaces** and interpersonal communication systems understanding language, gestures

*The emphasis is on scientific and technological advance and on developing new engineering principles based on solid theoretical foundations.*

# Activities, Funding Schemes, Contact

## Activities:

- **Research** into systems design, engineering principles for artificial systems
- Structuring, road mapping and assessing research
- Co-ordination with national activities

## Funding schemes:
